

Sample

From page 98 of the monograph version:

"Other studies have also found that AZT inhibits T-cells and other hemopoietic cells in vitro at 1–8 μ M (Balzarini et al., 1989; (<http://bialystocker.net/files/balz.pdf>) Mansuri et al., 1990 (<http://bialystocker.net/files/mans.pdf>); (Hitchcock, 1991 (<http://bialystocker.net/files/hit.pdf>))”

A note about the sample: This page was made by uploading, from the CD, the three hyperlinked files to my website, and typing the quoted text. Eventually the entire CD will be available in this web-friendly format, but it is going to take a while to upload and relink the many references, and mount them on a server with sufficient bandwidth.
